

Fresh Pandas Practice Questions

Practice Set – Filtering, Sorting, loc, iloc, GroupBy & Aggregation

Level 1 – Filtering & Selection

1. Display the employees whose salary is greater than 60,000.
2. Find all employees who have more than 5 years of experience.
3. Display employees working in the IT department with a performance score greater than 8.
4. Find employees whose attendance percentage is below 85.
5. Display employees who have completed more than 10 projects.
6. Find employees working in either Kochi or Bangalore.
7. Display employees whose satisfaction score is 8 or above and whose experience is at least 5 years.
8. Find employees whose salary is between 40,000 and 70,000.

Level 2 – Sorting

1. Sort the employees based on salary in descending order.
2. Sort the DataFrame based on experience_years in ascending order.
3. Display the 10 employees with the highest performance scores.
4. Find the 5 employees with the lowest attendance percentage.
5. Sort employees first by department and then by salary in descending order.

Level 3 – loc & iloc

1. Using loc, display the first 10 employees with only: first_name, department, and salary.
2. Using iloc, display rows 20 to 30 and columns 2 to 6.
3. Using loc, display employees whose performance_score is greater than 9.
4. Using iloc, display the last 5 rows of the DataFrame.
5. Using loc, display the first_name, salary, and bonus columns for employees working in Finance.

Level 4 – GroupBy

1. Find the average salary of each department.
2. Find the maximum salary in each department.
3. Find the minimum performance score for each department.
4. Find the total bonus paid by each department.
5. Find the average satisfaction score for each work mode.
6. Find the number of employees in each city.
7. Find the average experience of employees in each department.
8. Find the total number of projects completed by each department.

9. Find the average salary based on education level.
10. Find the average attendance percentage for each work mode.

Level 5 – Multiple Aggregations

1. For each department, find the average salary, maximum salary, and minimum salary.
2. For each department, calculate the average performance score, average satisfaction score, and average attendance percentage.
3. For each work mode, find the number of employees, average salary, and average performance score.
4. For each education level, find the average salary, average experience, and average performance score.

Challenge Questions

1. Find the department with the highest average salary.
2. Find the department with the highest average performance score.
3. Find the city having the largest number of employees.
4. Find the employee with the highest total compensation (salary + bonus).
5. Find employees whose salary is above their department's average salary.
6. Find the top 3 highest-paid employees from each department.
